***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,3,4 and 6-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gutman et al WO 03/097603 in view of Wouters et al Eur. J. Med. Chem. vol. 35 pp 923-929.

Gutman et al teach reacting 4-m-tolyamino-3-pyridinesulfonamide, lithium carbonate or bicarbonate and isopropylcarbamate in aqueous solution. See page 13 steps f to h. As to claim 2 see page 12 step d.

Gutman et al does not teach using isopropylisocyanate. Wouters et al teach an analogous process in which uses isopropylisocyanate albeit in the presence of an organic solvent, e.g. acetone. See, for example page 928 lines 1-10 below Table III. It is also noted that isopropylisocyanate in aqueous solution inherently forms isopropylcarbamate.

Thus it would have been obvious to employ isopropylisocyanate as the source of isopropylcarbamate in Gutman et al as the results, formation of torsemide, would not have been unexpected.

No claim is allowed.
